A detachable and foldable visor is provided for use on a lap-top or portable computer monitor. The visor has a central panel and two side panels adapted to extend across the top and the sides of the monitor. Multiple score lines are provided between the central panel and side panels to facilitate using the visor on monitors of different widths. Mounting tabs are connected to or on the side panels which cooperate with a rubber band or other flexible retainer to exert a tensile force holding the visor onto the monitor. The visor is foldable into a compact and flat position in which it can be easily carried in the same case as the lap-top or portable computer.
